# Lancaster Farming

VOL. 9 NO. 47 | Lancaster Farming, Saturday, October 24, 1964 | $2 Per Year

SHOWN FOLLOWING THE LANCASTER COUNTY FARMERS ASS'N BANQUET are (left to right) J. Robert Hess, president; Clyde Wivell, vice-president; Herbert Harris, assistant legislative director for American Farm Bureau Federation, Washington, D. C.; Donald Ney, secretary-treasurer. Harris was the guest speaker at the affair. L. F. Photo

## L.C. Farmers Ass'n Told At Banquet Not To Stake Future On Gov't Programs

Because of the recent reapportionment ruling, and because of farmers' increasing minority standing, they can not rely on marketing their products through government programs in the future, they must assume an independent role in the market place This was but one of the straightforward facts told to 205 members of the Lancaster County Farmers Association at their annual banquet at The Plain and Fancy Farm by Herbert Harris, Assistant Legislative Director of American Farm Bureau Federation in Washington D C.

Harris said that if farmers could receive the true value of their products their incomes could be increased substantially. But to do so, he emphasized, the farmers must be properly represented in the market place. He spoke primarily of the export market which did a $6 billion business last year in agricultural products. Agriculture is the biggest export industry in the country.

Too often, Harris said, export is looked upon as a dumping ground for our surplus products; this is not the proper approach to building a profitable export trade. In the past 8-10 years the American Farm Bureau Federation (AFBF) has been working to set up foreign markets; to find out what is wanted, how it is wanted, and how we can supply it. They have an office established in Rotterdam through which foreign interests can directly bargain for American farm products and vice versa.

Harris said that the trade meetings that are taking place in Geneva right now may well decide the future for export of our farm products. The Common Market Countries want to keep us out because of our restrictions on their

## Eugene Hosler Wins Top State 4-H Award

Eugene Hosler, Manheim R3, was named Pennsylvania State winner in the area of swine projects by the judging committee at Pennsylvania State University.

Hosler, with thirty-three other winners, will attend the 4-H Congress in Chicago, November 27 to December 5.

This award is one of the two highest a 4-H member can attain. (The other is being selected as a delegate to the National 4-H Conference in Washington D.C.) It is not based solely on project work; the honor goes only to those who have a record of outstanding citizenship and general accomplishments in the area of youth leadership.

Hosler is also a member of

(Continued on Page 13)

## Top Jr. Leader Award Goes To Judith Warfel

A banquet honoring the 4-H Club Junior Leaders was held Friday night at the Meadow Hills Dining Room. Judith J. Warfel was named as recipient of the top award, "Superior," for her outstanding leadership record during the past year. Miss Warfel was not present to receive this award, a handsome pen set, and arrangements were made to present it at Lancaster County 4-H Achievement Night which will be held on October 30, 7:30 p.m. at the Penn Manor High School.

Miss Warfel, is the 18-year old daughter of Mr. and Mrs. Charles D. Warfel of Conestoga RJ. She is a sophomore at Elizabethtown College, and is majoring in Nursing. As part of her leadership duties she

## ASCS Surveys Tobacco Acreage

The Agricultural Stabilization and Conservation Service County Office reports that survey forms have been sent out to Lancaster County farmers to determine the acreage that is planted in tobacco. This survey is nothing new; it is taken every three years.

The data collected will be used in preparing for the Tobacco Referendum which will be held in January or February of next year. This referendum will be to determine whether farmers do or do not want production quotas set for

(Continued on Page 9)

## Name 3 Census Crew Leaders

It was announced this week by the U.S. Department of Commerce that the following three countians will serve as Crew Leaders for Lancaster County for the 1964 Census of Agriculture: Mrs. Doris L. Myers, Landisville; Robert B. McSparran, Peach Bottom; Robert H. Stamm, Lincoln. They are three of about 1,825 persons throughout the U.S. to receive this appointment.

The crew leaders job will be to supervise a team of enumerators who will visit all

# Weekly Broiler Report

**State Placements Increase**

Placements of broiler chicks in the Commonwealth by hatcherymen during the week ending October 17, totaled 643,000, according to the Pennsylvania Crop Reporting Service. This was an increase of 6 per cent over the previous week but remained the same as a year ago. The 10-week total was 10 per cent above the comparable period a year ago. Settings for broiler chicks totaling 1,187,000 eggs, were 10 per cent below the previous week but 17 per cent above a year earlier. The 3-week total was 22 per cent above last year. Inshipments of broiler-type chicks the past 10-weeks totaled 663,000 or 9 per cent above the comparable period a year ago. Outshipments of 1,282,000 were down 10 per cent.

Placements in the 22 major producing states totaling 36,203,000 chicks were down 1 per cent from the previous week but were 4 per cent above a year ago. The 10-week total was 6 per cent above last year. Settings of 51,472,000 eggs were 2 per cent above a week earlier and 4 per cent above a year ago. The 3-week total was 3 per cent above last year.

**Eastern Pa. & N.J.**

Demand on heavy type hens only fair with offerings generally adequate. Supplies of light type hens ample for a fair demand. Prices paid at farm for light type hens 5½-7¢ mostly 6-6½¢. # From Where We Stand . . .

## What Ever Became Of Premier Krushchev?

We don't know where our chubby, pig-eyed little playmate has gone, but we'd bet that one thought uppermost in his mind the past week or so was — "where did I go wrong?"

We think that one obvious place he went wrong was that he couldn't resolve the agricultural dilemma in a centralized, bureaucratic framework. (our leaders are having the same problem, but in a democracy, it takes longer to throw them out!).

Albert A. Thornbrough, President of Massey-Ferguson Limited, suggested in a current events letter which he sent out just a few weeks ago that unless Krushchev could solve his agricultural dilemma "he would become increasingly vulnerable to political embarrassment at home." The embarrassment is now history, and so is Mr. K.

Krushchev undoubtedly realized what steps he would have to take if he was ever to see Russian agriculture feed its people adequately. It takes a lot of empty stomachs and unrest to permit a dictator to seize power, but it takes a lot of satisfied stomachs to keep him there. He knew he would have to ease up on the tight rein that the Kremlin held on agriculture, and probably institute some of the western "free enterprise" methods.

Whether his successors will have the foresight to do what Krushchev failed to do is anybody's guess. The Soviet people have — since de-Stalinization — enjoyed a somewhat higher standard of living, but they won't be kept happy too long on short rations. Reasoning that the more unrest in the Communist countries the better, perhaps it would be more to our advantage if the Soviets, and their Chinese neighbors, never solve their agricultural problems.

What Do **YOU** Think?

## Nature's Way

With the recent pesticide scares that have plagued Agriculture, scientists are making strenuous efforts to learn to control pests biologically rather than just chemically. Obviously, this can not replace pesticides, but it may ease our almost-constant need for them.

Among the genetic and biological tools of nature, scientists are studying the bat as a possible use of sound to control insects. The bat played an important part in man's adaptation of radar some years ago. Now the lowly creature is being tapped again for his deepest secrets.

When the bat goes out for dinner, or, considering the fact that he has just awakened, perhaps it's breakfast he's after, he admits a soundless cry that works like radar. It helps him to locate the night-flying insects that are his favorite delicasies. One of these insects is the bollworm (in its moth stage, naturally). The bollworm, alias the corn earworm, and the tomato fruitworm, is a very destructive pest of cotton.

This struggle in nature is not exactly a one-way proposition. The bollworm moth has a built-in receiver that is tuned to this radar ray of her enemy. When she picks up these vibrations she takes evasive action — much like a fighter pilot with an enemy plane pursuing him. The moth dives, spirals, and twists as though her life depended on the outcome, which surely it does.

The scientists are working on the theory that if they can simulate this "sound" of the bat they can scare the moth away from the cotton fields, and prevent others from invading the area and laying eggs.

In laboratory tests, the moth's response to the man-made bat sounds was similar to her response to the natural bat sounds.

In field tests a rotating loud speaker was placed in a cotton field to send out the bat-like sound waves. The data from these tests has not yet been analyzed, but the scientists involved feel hopeful that this procedure will be successful and economically feazible.

This wedding of scientific immagination and nature's ways holds considerable promise for future pest control. We'll bring you more of these reports as they come along.

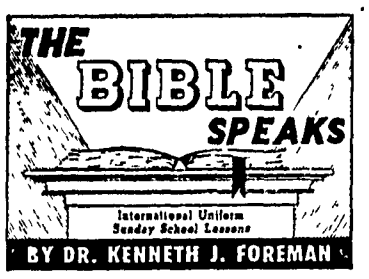
## What Other's Think

ABILENE, KAN., REFLECTOR-CHRONICLE: "A news dispatch says the government has brought monopoly charges against the bubble gum manufacturers. They are accused of cornering the market on pictures of baseball stars to put in bubble gum wrappers. One's first reaction to this is that if our people in government don't have more to do than fret about bubble gum wrappers we have too many people in government."

GILLESPIE, ILL., NEWS: "The history of the United States was written upon 'Extremism', from the Boston Tea Party, down through World War II. These extremists were frantically patriotic. They gave their lives to keep Old Glory flying, proclaiming that this nation would kneel to no foreign power. These men were never called Extremists, they were patriots, and history books were filled with their deeds that kept us free, respected and proud."

AZTEC, N. M., INDEPENDENT-REVIEW: "It is to be hoped that no one ever requests an opinion on the Ten Commandments from the U. S. Supreme Court."

FORT PIERRE, S. D., TIMES: "This is no time to uproot our established, fair and effective immigration policies, and let down the barriers in a noble gesture to all dissatisfied humanity In view of the nation's preoccupation with unemployment, the related and continuing advance of automation and the 'war on poverty'; and in the light of the multiple Federal programs with budgets as high as a billion dollars (for the poverty war), we can think of no greater disservice than to invite an indiscriminate and vastly expanded global influx of all kinds and conditions of humanity."



## Keeping Fit

**Lesson for October 25, 1964**

Background Scripture: I Timothy 3:14 through 4:16
Devotional Reading: I Corinthians 9:24-27.

AS USUAL, there is a great deal more in the passages of Scripture which have been selected for this study than we shall get out of it. But the reader will be rewarded for his own explorations. The topic chosen is one out of several that are to be found here.

Dr. Foreman

One striking thought in these few sentences is that there is a likeness between athletes such as you see in an Olympic contest, and athletes of the spirit. The first thing an athlete in any sport has to learn—and if he doesn't learn it he never learns anything else—is keeping fit.

**Follow directions**

When a boxer goes into training, or a swimmer is pointing toward the big meet, there is always a trainer. Whether it's bodybuilding exercises in general or working up a good backhand in tennis, or whatever, if you won't or can't take directions you won't go far. We can think of Paul as Timothy's spiritual teacher. Timothy was an unusually good man, you would think he did not need any one to tell him; but his friend Paul writes to tell him what to do to become a better Christian, a better man, a better minister. If you get to thinking you know more than the coach, you won't stay on the squad long. Yet a good athlete is not a mere robot, he thinks for himself. One of the jobs a trainer has is to cultivate, in the men he is training, independence of judgment, ability to act quickly in new situations. In the same way, growing in the spiritual life is going to be impossible for the person who refuses to learn from those who are better at it than he is.

**Good food**

Another essential in physical training is good food. You don't feed a football team on cokes and malteds all the time. You can't build up a strong body by eating and drinking half-spoiled food and drink. It's the same way with what is more important than your body, namely your soul. Your soul is just your real inner self, your soul even more than your body is you.

**Train yourself**

The old-fashioned word "godliness" means simply God-likeness. There is no higher aim possible to any man than to become like God. But Godlikeness does not descend on us like sunshine and rain. Timothy at any rate (and no doubt you and I too) was expected to train himself in Godlikeness. Remember Timothy was a good man. If anybody could grow spiritually without trying, surely it was he. But Paul talks about toiling and striving—he followed his own advice! It is not easy to grow as a Christian. Paul himself referred to the whole of the Christian life as a fight, a race. Anyone who sincerely wishes to grow more like the master has a fight on his hands. There is too much in this world that hates goodness, for goodness to be had just for the wishing.

**Practice**

Watch a pitcher warming up in the bull pen. Why does he do it? He's been on the mound scores of times before. Baseball is nothing new to him. And yet he, this seasoned pitcher, has to practice just as if he were a rookie. No matter how good you are as an athlete in any line, you need practice to improve. One pole vault is not enough to perfect your form. This is just as true in the inner life. One act of kindness does not make you a kind man. One deed of self-sacrifice does not turn you into a saint. It is only the beginner in golf who keeps thinking how to hold his wrist. Only after years of practice will he be able to hold his wrist right without thinking. How much more important it is to live rightly with God and other men! But if you don't practice you'll never learn.

# Now Is The Time . . .

**BY MAX SMITH**

MAX SMITH

**To Protect Milking Cows**

Dairymen should be concerned about the chilling of producing udders that might cause udder inflammation and mastitis. Days are getting colder and the ground is getting too cold to permit the milking cow to spend the night outside. Neither should the milking herd be allowed to lie down on bare concrete for fear of chilling the udder tissues.

**To Ventilate New Corn**

If new corn is to be piled on the barn floor or some other place with poor cross ventilation, extra air ventilation should be provided. Hay drying fans blowing air through ducts under the pile of corn is getting the job done on many farms. When the corn is put into the conventional corn crib, the width or thickness of the pile of corn is much smaller than when piled on the floor. Heating and molding may occur if extra ventilation is not provided.

**To Exercise Milking Herd**

Winter is just around the corner, and now is a good time for dairymen to plan ahead for the comfort and health of the herd This should include daily outside exercise for the milking cows. Cows like to exercise daily and it is a good time to observe heat periods and signs of lameness or illness. The time and effort required will be worthwhile.

**To Give Special Care to Shipped Cattle**

Many steers are being brought into the county for feeding purposes. Shipping fever continues to be a problem among shipped cattle. Upon arrival the cattle should be handled quietly, be allowed to lie down and rest for several days, and be kept in open well-ventilated quarters but out of cold rain or snow. The rations should consist mostly of grass hay or roughages with very little grain. Light calves are most likely to come down with shipping fever because of lower resistance.

More than 15 million World War II veterans on the Veterans Administration rolls at the close of Fiscal Year 1964, averaged 45 years of age.

farms in Lancaster County to collect official census questionnaires from farm operators Enumeration of all farms will take place in November and early December

Shortly after November 5 the Bureau of the Census will mail questionnaires to all rural boxholders Those required to fill out the forms should do so and hold them until the enumerator calls.

The crew leaders are key people in this task It is their job to recruit and train the enumerators, schedule their work, review the accuracy of completed forms, and assist the enumerators when difficulties arise.

The Census of Agriculture is taken every five years, in years ending in "4" and "9". Information is thus gathered on the nation's agricultural resources and production Such data is vital in making decisions affecting many segments of the national economy Data gathered include the number and size of farms, acreage and harvest of crops, livestock inventories, and information on farm equipment, improvements, income, and production expenditures.

# Coccidiosis outbreaks at this time of year can be disastrous. Be prepared

**Even under the best conditions, coccidiosis outbreaks can and do occur — especially after birds are in off the range. Read why Amprol Solution, of the many good coccidiostats on the market, is probably the best for controlling potentially ruinous outbreaks at this time of year.**

**When coccidiosis strikes, AMPROL** (R) Solution does what you want it to do, does it promptly and with no unwanted side effects.

**1. Amprol Solution stops coccidiosis fast. AMPROL** Solution literally "starves" coccidia to death, works against mixed infections, helps wipe out mortality. It's been tested, tried and proved on millions of birds.

**2. Amprol Solution doesn't cause setbacks.** Even at several times the normal use level, **AMPROL** Solution is without unwanted side effects — won't interfere with feed intake and feed efficiency. And where hemorrhagic disease is a problem, Amprol Solution will not aggravate the condition, hence is **the** coccidiostat of choice.

**3. Amprol Solution is easy to use** — is fully palatable, so birds accept is readily, stirs smoothly into water and won't settle out or clog.

**Note:** *If* **AMPROL** *Solution doesn't control a suspected coccidiosis outbreak in three to five days, better check the diagnosis. Could be some other disease giving you trouble.*

**Tops for broilers, too.** More and more broiler growers everywhere are switching to **AMPROL** Solution to help control coccidiosis breaks — to help eliminate condemnations and downgrading.

Your supplier carries **AMPROL** Solution in 8-oz, 1-qt. and 1-gal. plastic containers. Order a supply today — and be prepared.

## ● L.C. Farmers

(Continued from Page 1)

manufactured products. If we expect them to buy our agricultural products, we must lower our restrictions against their products He stressed that farm products must be included in this bargaining or farmers will suffer drastically from reduced exports He pointed out that Secretary Freeman would like to establish an International Commodity Agreement which, Harris said, would amount to one big international supply management set up with politicians running the show Harris warned that if we allow ourselves to get trapped in such a commodity agreement we will begin to lose our markets instead of building them He also said that an international commodity agreement would lead directly to many national commodity agreements.

He reminded his audience that 78 per cent of Pennsylvania farmers had voted against the mandatory wheat program The Administration countered this by forcing Congress to pass a "voluntary" wheat program "How can the government get farmers to cooperate on a voluntary program," Harris asked? "By simply making sure that if they don't go along, you bust their market!"

As an example of this, he cited the release of 140 million bushels of wheat by Commodity Credit Corp. onto the domestic market to keep the price down, and thus be sure that farmers would have to sign up in the voluntary program

Harris emphasized that for every bushel of wheat the U S sold recently the American farmer was penalized 12 cents a bushel That was the difference between what we sold it for and the going price on the world market. AFBF, along with others, protested strenuously Now, due primarily to the impending election, the export penalty has been reduced to zero If we ever get to thinking the wheat program is voluntary, Harris cautioned, remember the Sec of Agriculture can release wheat and smash the market any time he chooses.

A short business meeting followed in which Mrs. Noah Wenger gave a report on the activities of the women's committees since the last meeting

Harold Rohrer, who represents York, Adams and Lancaster counties in the State association (PFA) spoke about bus transportation on December 8 to the AFBF Annual Convention in Convention Hall, Philadelphia. The Convention runs from December 6-10, but the 8th is Pennsylvania Day. Pennsylvania will be honored for having the largest percentage increase in AFBF members of any state in the northeast.

Noah Wenger reported for the membership committee of the Lancaster County Farmers Ass'n that there had been an increase of 148 members this year over 1963 He stated that Lancaster county now stands in second place in the state association in number of members (total members in county is about 700). But Wenger stressed the need for even more members. "Everything we want to get done," he said, "depends on active members"

Six new directors were elected by the membership They were James Garber, Noah Wenger, James Kreider, Leroy Pfautz, John Charles and Ellis K. Mentzer.

J Robert Hess, president of the Lancaster County Farmers Ass'n. had opened the meeting

### Cattle

Although there were 2 per cent less cattle on feed in the U.S., cattle feeders in Pennsylvania had 51,000 cattle and calves on feed for slaughter market on October 1, 1964, according to the Pennsylvania Crop Reporting Service. This was 1,000 head, or 2 per cent, more than were on feed on October 1, 1963. Marketings of fed cattle during the July-September quarter were 34,000, the same as a year earlier. There were 42,000 cattle placed on feed during the quarter compared with 35,000 the previous year Cattle on feed less than 3 months on October 1 totaled 35,000 head up 4,000 from a year earlier. The number of cattle on feed 3-6 months at 6,000 was down 3,000 from a year earlier, and more than 6 months was unchanged at 10,000 head. Numbers of cattle in the under 500 pounds, 500-699 pounds and 700-899 pounds classes increased 1,000 head each to 4,000, 9,000 and 20,000 respectively while the 900-1099 pounds class at 15,000 was unchanged.

### Dairy

Milk production in the Keystone State in September totaled 547 million pounds, a million pounds more than in September 1963, according to the Pennsylvania Crop Reporting Service.

But, the Service pointed out, it was accomplished with 24,000 fewer cows. Dairymen had an estimated 816,000 cows on their farms in September compared to 840,000 a year earlier. Average milk production per cow in September was 670 pounds, 20 pounds more than in the previous September.

### Layers

A total of 253 million eggs were produced in the Commonwealth in September, up 3 per cent from a year earlier, according to the Pennsylvania Crop Reporting Service.

Layers averaged 17 10 eggs each, compared to 17.04 in the previous September Prices received by farmers, averaged 38 cents a dozen, three cents less than last year.

## *Baking Bread Is Easy*

By Mrs. Richard C. Spence

SPENCE

Some questions and their answers on baking bread —

Q. How can I be sure bread is baked enough?

A. The loaves should be well colored on sides and bottom as well as the top. Tap the bottom and sides with the fingers — if there is a hollow sound, this also proves the bread is thoroughly baked.

Q. Why does bread break or crumble when it's being sliced?

A. Several things could cause this condition. (1) Undermixing (not thoroughly mixing), (2) too warm a rising place, (3) too much flour (4) too cool an oven during the baking.

Q What is light rye bread?

A. Light rye means the bread contains only a small amount of rye flour, in proportion to the white. Such a bread may or may not contain caraway seeds. Since white sugar is the sweetening ingredient, the bread is more bland than those containing molasses

Q Why does my bread dough rise fine in the bowl but not in the oven?

A. The dough has been either given too long a rising time so the action was used up, or the rising place may have been so warm some of the yeast was destroyed. In either case there could not possibly be much rising in the oven (ovenspring).

Q. Is it necessary to lower the oven temperature when baking white bread in Pyrex pans?

A. No, such a recipe does not carry a high percentage of sugar or fat.

Q. I let my bread rise in the oven with a pan of hot water. The oven was on at 150 degrees, the lowest temperature, but the doughs didn't rise.

A. The dough couldn't rise because at least part of the yeast was killed. Dry yeast is dissolved in 110-115 degree water. A sustained temperature of over 130 degrees will destroy yeast.

Q. Is it true that certain spices and herbs speed up the action of yeast in doughs?

A. Yes, small amounts of ginger (spice), caraway (herb) or thyme (herb) stimulate yeast doughs. One can use ¼ to ½ teaspoon of ginger and thyme for 3 cups of flour, 1 to 1½ teaspoons caraway.

Q. Does dry yeast work as well as compressed?

A. It certainly does, if it is handled according to the directions.

Q. Is it possible to bake 6-loaf batches of bread in a small oven? Is it possible to bake half the loaves at a time without spoiling the other three?

A After the first bowl rise, punch down the dough. Remove half from the bowl, let rest 10 minutes, then shape into loaves, let rise and bake. Let the second half have another bowl rise, punch, etc. as before.

Q. What happens if a yeast dough is allowed to rise too long?

A. If a dough is over-fermented, "old" dough results —that is the dough is tight, and breaks easily when handled. The baked loaf also crumbles and breaks easily.

Q. What happens if a dough is not allowed to rise long enough?

A. Under-developed dough is called "green." The cell walls of such baked products are heavy and coarse.

* * *

How about giving some of these yeast breads a try?

* * *

**RAISED CORN MEAL MUFFINS**

1 cake compressed or 1 package dry yeast
¼ cup lukewarm water
2 cups milk, scalded
½ cup shortening
½ cup sugar
1 tablespoon salt
4½ cups sifted all-purpose flour
2 eggs
1 cup corn meal

Soften yeast in lukewarm water. (Use warm water for dry yeast.) Pour scalded milk over shortening, sugar and salt. Stir occasionally until shortening melts; cool to lukewarm. Beat in 1 cup flour and eggs. Stir in softened yeast and corn meal. Beat in 2 more cups of flour, beating 2 minutes on medium speed of electric mixer or 300 vigorous strokes with a wooden spoon. Beat in remaining flour by hand (Batter will be thick.) Cover; let rise in warm place until double in size, about 1 hour.

Stir batter down; spoon batter into greased muffin cups, filling each about ⅔ full. Cover and let rise in warm place until nearly double in size, about 45 minutes. Bake in preheated hot oven (400 degrees) about 15 minutes or until gold-

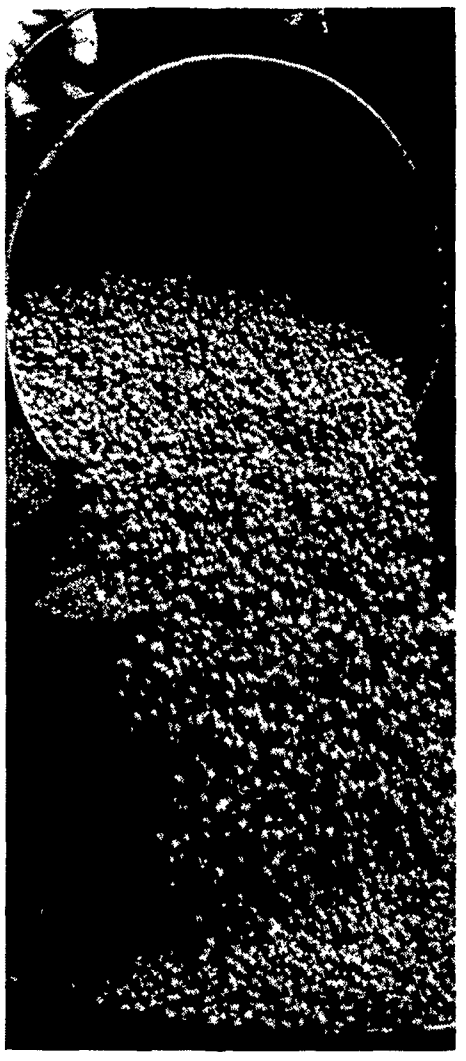
RED ROSE FARM FEEDS

# NEW TECHNIQUES WITH AN OLD TIME TOUCH

**PROBLEM** Profit-minded swine growers needed a combined program of good management, good basic stock and good nutrition to meet the needs of swine in every stage of their life cycle. Also to condition sows for farrowing more live, heavier pigs that will reach finishing faster on less feed per pound of gain.

**RESEARCH** Alert to new techniques, research men at John W Eshelman & Sons—using only market breeds under normal farm conditions—worked in the laboratory and with the swine, studying weights from birth to market, feed consumption, mortality, farrowing, growing, finishing and also the carcass quality.



**RESULT** The Red Rose Swine Production Program is geared to every stage of feeding for today's pork production needs and goals. Our Red Rose Research Farms consistently market 200 lb. hogs in 150 days or less, with a 2.8 or better feed conversion. Our record pen: 200 lbs in 118 days, with a feed conversion ratio of 2.1.

baking.

Q What is light rye bread?

A. Light rye means the bread contains only a small amount of rye flour, in proportion to the white. Such a bread may or may not contain caraway seeds. Since white sugar is the sweetening ingredient, the bread is more bland than those containing molasses

Q. Why does my bread dough rise fine in the bowl but not in the oven?

A The dough has been either given too long a rising time so the action was used up, or the rising place may have been so warm some of the yeast was destroyed. In either case there could not possibly be much rising in the oven (ovenspring).

Q Is it necessary to lower the oven temperature when

Q. I let my bread rise in the oven with a pan of hot water. The oven was on at 150 degrees, the lowest temperature, but the doughs didn't rise.

A. The dough couldn't rise because at least part of the yeast was killed. Dry yeast is dissolved in 110-115 degree water A sustained temperature of over 130 degrees will destroy it.

Q. What happens if a yeast dough is allowed to rise too long?

A. If a dough is over-fermented, "old" dough results—that is the dough is tight, sticky, and weak. It rises quickly and collapses when touched.

Q. Why do you punch down bread dough?

A. Punching down the dough releases the gas bubbles and makes room for more rising. Punching down also distributes the yeast cells and food for more even action.

Q. Why do you let bread dough rise twice?

A. The first rising develops the flavor and texture. The second rising, after the dough is shaped, makes the bread light and fine-grained.

Q. Why do you grease the pan after the dough rises?

A. Greasing the pan after the dough rises prevents the dough from rising properly.

Q. Why do you let bread cool on a rack?

A. Cooling on a rack allows the air to circulate around the bread and prevents moisture from collecting on the bottom crust.

Q. Why do you cut bread with a sawing motion?

A. Sawing with a sharp knife cuts the bread without squeezing it.

Q. Why do you store bread in a bread box?

A. A bread box keeps the bread from drying out too much.

Q. Why do you wrap bread in waxed paper?

A. Wrapping bread in waxed paper keeps it from drying out too much.

Q. Why do you store bread in a cool place?

A. A cool place keeps the bread from getting moldy.

Q. Why do you store bread in a dry place?

A. A dry place keeps the bread from getting moldy.

Q. Why do you store bread in a dark place?

A. A dark place keeps the bread from getting moldy.

Q. Why do you store bread in a clean place?

A. A clean place keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be disturbed?

A. A place where it won't be disturbed keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to light?

A. A place where it won't be exposed to light keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to air?

A. A place where it won't be exposed to air keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to moisture?

A. A place where it won't be exposed to moisture keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to heat?

A. A place where it won't be exposed to heat keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to cold?

A. A place where it won't be exposed to cold keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to dust?

A. A place where it won't be exposed to dust keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to insects?

A. A place where it won't be exposed to insects keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to rodents?

A. A place where it won't be exposed to rodents keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to birds?

A. A place where it won't be exposed to birds keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to animals?

A. A place where it won't be exposed to animals keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to people?

A. A place where it won't be exposed to people keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to anything?

A. A place where it won't be exposed to anything keeps the bread from getting moldy.

Q. Why do you store bread in a place where it won't be exposed to nothing?

A. A place where it won't be exposed to nothing keeps the bread from getting moldy.

## ● For The Farm Wife

(Continued from Page 8)

en brown. Brush lightly with melted butter. Serve piping hot. Makes 2 dozen large muffins.

**SUGARED DOUGHNUTS**

To recipe for Raised Corn Meal Muffins add:

2 tablespoons additional sugar
1½ cups additional sifted all-purpose flour
½ teaspoon nutmeg

Stir in above ingredients just before beating in remaining flour. Cover; let rise in warm place until double in size, about 1 hour. Stir dough down. Roll out on lightly floured board or canvas to ½-inch thickness. Cut with floured 2½ inch doughnut cutter. Place on cooky sheets. Let rise uncovered in warm place until nearly double in size, about 45 minutes. Fry in hot deep fat (375 degrees) about 3 minutes or until golden brown, turning only once. Drain on absorbent paper. While warm shake in paper bag containing a small amount of granulated sugar. Makes 2½ dozen doughnuts.

GLAZED DOUGHNUTS: Frost warm doughnuts with thin confectioners sugar frosting; sprinkle with chopped nutmeats.

## ● ASCS

(Continued from Page 1)

Type # 41 tobacco.

The survey cards were to have been returned by Friday, October 23 The difference between the total acreage indicated from the cards and the true total acreage in the county will have to be estimated by ASCS. Some farmers have felt in the past that these estimates were not accurate. Any estimate is less accurate than an actual count, but the more farmers that do not return their cards the more acreage must be determined by estimate.

So, even if you have missed the deadline on returning yours to ASCS, get it in the mail today. They'd rather have your exact acreage figures than have you feel they had estimated these inaccurately.

# Ladies, Have You Heard? . . .

**By: Doris Thomas, Extension Home Economist**

THOMAS

**Practical Features For Child's Overalls**

Small pleats at the bend of the hips give extra seat length for stooping and squatting.

A built-up back and a front bib that buttons to the straps about halfway between waist and shoulder keep straps from slipping.

Legs should be wide enough for easy knee bending but not so wide they will cause the child to trip. Hems are safer than cuffs — you can make hems wide for letting out later.

Straps with several buttonholes to button inside the waist will allow you to lengthen the body of the overall as the child grows.

**No Time Limit When It Comes to Serving Milk**

Milk and milk products fit into the menu regardless of the time of day or night you serve food.

Milk is an ideal beverage at all three meals and for between-meal snacks.

Milk can appear as buttermilk in the breakfast pancakes; as cheese in the sandwiches at lunch, in the dessert for dinner.

Your Friendly Banker

You probably don't think of your cows as bankers, but if you put them on the Pioneer Feeding Program, they can be a sure source of steady, extra income. The goal of this high-nutrient feeding program is simple — more milk per cow. According to dairy specialists, 9 out of 10 cows don't get enough feed, or the proper kind of feed, to produce up to their genetic capacity If this is the case with your herd, you may be getting 2,000 pounds of milk less, per cow per year, than you should. The Pioneer Feeding Program is based on increasing feed allowance as long as milk production increases profitably. For example, as little as 600 pounds of feed invested in a dry cow returns as much as 2,000 pounds of milk. Your milking herd will respond equally well when you challenge them to milk right up to their capacity. **We'll be happy to show you how you can milk your cows for all their worth. We've done it for your neighbors in this community.** Just give us a call or stop in. We're friendly, too.

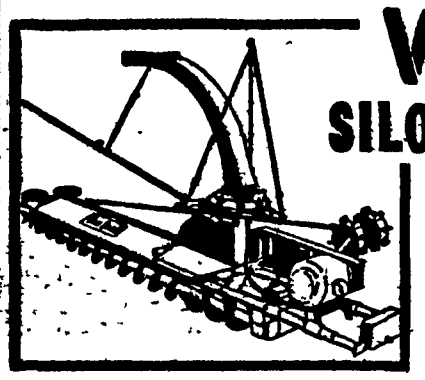
# Complete automatic feeding for DAIRY COWS and CATTLE!

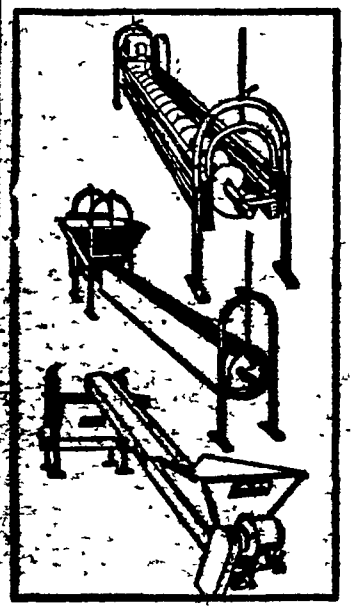


## VanDale SILO UNLOADERS

Double augers deliver more silage per minute even when silage is deeply frozen . . . and at a lower operating cost. Patented V-paddle impellers *throw* . . . not blow . . . silage down chute. Adjustable drive hubs give positive traction in all types of silage.

Three-point suspension keeps unloader level at all times.

## Plus a complete line of bunk feeders to meet your exact needs



**Straight-out Auger Feeder**

With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 16', high-capacity 9" auger. Additional auger sections are in 16' units and are easily coupled.

**Feed-R-Flo Bunk Feeder**

The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

**Conveyor Trough**

An important link in automatic feeding. Positioned below silo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 16', 9" auger. Additional 16' auger sections may be added.

See us for modern automatic feeding equipment

## Jr. Leader

(Continued from Page 1)

had complete charge of the Flower Project at the Penn Manor Community Club. This included planning the meetings and individual projects, arranging speakers, helping the younger 4-H'ers with their project problems and their record books.

Among her other activities Miss Warfel was a delegate to the Citizenship Short Course held in Washington D.C. in the summer of 1962; she has competed in 4-H Queen contests, and in the Pennsylvania Poultry Federation Queen contest; she has served as a member of Club 30-30 which is a leadership group that helps conduct the 4-H Congress at Penn State University; she has been in clubwork since she was 9 years old and has a long list of completed projects.

Each member of the Leadership Project completed a detailed record showing the type and extent of the leadership duties he or she performed in the local club. A written story on the project and evaluation by local leaders was an important part of the judges' scoring process.

There were two other award categories, "Excellent" and "Good." There were 9 recipients of the Excellent award, which was an engraved plaque; 22 people received the $3 Good award.

These were, Excellent Nancy Bollinger, Ruth Mellinger, Nancy Risser, Linda Hoober, Charles Warfel, Richard Warfel, Ruth Ann High, Susan Atkins and Rebecca Atkins.

Good Awards: Linda Young, Nancy Stoltzfus, Gary Porter, Carol Sites, James Houser, Jay Wissler, Marie Bushong, Janet Groff, Rosemarie Myer, Eileen Landis, Sylvia Myer, Suzanne Mumma, Jane Smith, Martha Fisher, Kaye Smith, June Ann White, Judy Buckwalter, Darlene Becker, Linda Neideigh, Janice Knight, Annette Long, Robert Henry.

A total of 32 members completed the Junior Leader project this year This is the first year that Junior Leadership has been organized as a formal project in Lancaster County Funds for awards to this project were made available through the Lancaster County 4-H Development Fund.

## ● Have You Heard?

(Continued from Page 9)

Ice cream, another form of milk, is a favorite dessert, and also is good between meals when combined with milk as a shake or soda.

**Time-Saving Ideas When Preparing Biscuits**

Although biscuits are traditionally round, you can cut them into other shapes and save time After rolling out the dough use a sharp knife to cut dough into squares or diamonds There's no waste because you use every bit of the dough It's a good trick to remember when you're in a hurry—is faster than using a cutter.

Drop biscuits — from a slightly softer dough than rolled dough — are easy Drop the softer dough on greased baking sheet and bake 10 to 12 minutes at 450 degrees. Drop biscuits have crisper crusts than do kneaded and rolled biscuits

**FARM WOMEN SOCIETY #3**

At their regular monthly meeting in the Social Hall of the Salem Lutheran Church, Lincoln, Group #3 entertained 36 members of Group #6 at a luncheon.

Mr. Wm. Myer, Myerstown, Pa, gave a travelogue of a recent trip to Europe. It covered Russia, Poland, The Berlin Wall, and Switzerland.

Officers were elected for 1965 They were: President, Mrs Harry Usner, Vice-pres, Mrs Wm Eberly, Sec, Mrs Harry Palm, Ass't Sec, Mrs Raymond Raihl; Treas, Mrs. Harry Gehman

Society members will fold Christmas Seals on Nov 24, 2-4 p.m. at the Health Center.

Plans were discussed for the Annual Party at the Harrisburg State Hospital to be held November 19

The Society presented gifts to outstanding 4-H Club leaders for their work with the girls of their respective communities. These leaders were: Mrs. Ivan Eberly, Mrs. Harold Stuber, Mrs. Harold Fry.

The next meeting will be held Nov. 21 at the home of Mrs. Harry Usner at Mt. Airy.

**AUNGST COMPLETES OUTSTANDING HERD AVERAGE**

A new herd production average of milk and butterfat has been announced for the Registered Holstein herd owned by Hiram S. Aungst, Elizabethtown

As reported by the Holstein-Friesian Association of America, the herd has completed its latest testing year with a per-cow average of 16,049 lbs of milk and 623 lbs. of butterfat, based on 26 completed lactation records.

This performance level compares favorably to the average U.S. cow's annual output of 7,500 lbs. of milk and 275 lbs. of butterfat. Herd production averages are calculated on the commonly employed; two milkings per day, 305-day, mature equivalent basis to provide a comparison standard for selection in Registered Holstein breeding programs.

the 4-H county livestock judging team that won the state championship at Penn State University earlier this year As state champions this team will Livestock Exposition in Chicacompete in the International go on the Saturday after Thanksgiving.

Eugene, 18, is the son of Mr. and Mrs Mark W. Hosler He has been active in 4-H work for eight years with many projects in swine, beef and vegetable crops. He has held such 4-H offices as local club president, member of the county council, and county president. He is presently a freshman at Elizabethtown College.

# New from HOFFMAN Haymor Alfalfa

### MORE HAY

Haymor means just what its name says . . . you get more hay. In 20 different comparison trials in northern states, Haymor outyielded Vernal by an average of 4%—and in at least one case outproduced Vernal by 22%. In six of these trials where Ranger was also grown, Haymor averaged 12% more hay than Ranger. Haymor means more hay and more profit for you.

### FAST STARTS

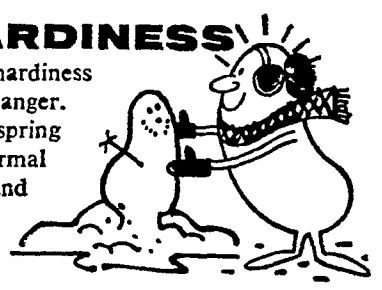
Haymor is noted for its excellent seedling vigor. It establishes fast to make a thick, healthy stand. Its extra vigor makes it easier to establish under more competitive conditions.

### RESISTS DISEASE

Haymor has resistance to bacterial wilt disease and has good tolerance to common leaf spot diseases. This disease resistance is another big reason why you will want to put Haymor in your fields.

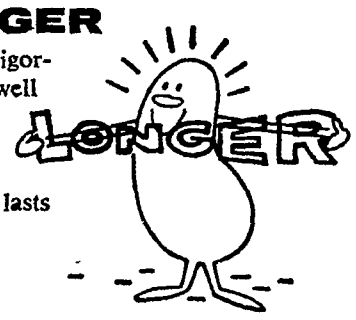
### WINTER HARDINESS

Haymor has good winter hardiness . . . in the same class as Ranger. This feature, plus its good spring vigor, makes it ideal for normal rotations and general hay and pasture uses.

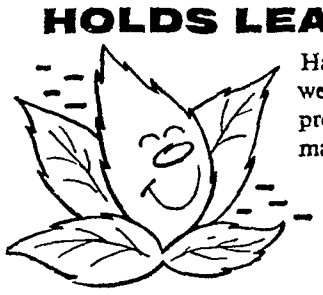


### LASTS LONGER

Haymor is an unusually vigorous variety that performs well under all types of soil where alfalfa is grown. Because of good disease resistance and hardiness, it lasts longer and provides better hay and pasturage.



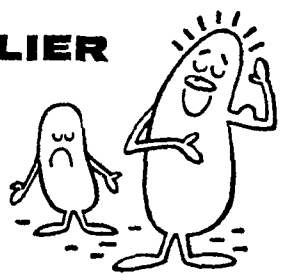
### HOLDS LEAVES LONGER



Haymor holds its leaves extremely well. This ability to hold on to its protein-packed leaves means it makes top quality hay or silage.

### MATURES EARLIER

Haymor — similar to Du Puits — matures earlier than most other alfalfas. In fact, Haymor is only about two days later than Du Puits — 3 to 4 days earlier than most U.S. alfalfa types.



### MIXES WELL

Haymor is a top producer whether it's planted alone or in combination with other legumes and grasses. Its disease-resistant features make it ideal for use in hay and pasture mixtures.

# Fresh Air Fund Hosts Countians

By Everett Newswanger
Staff Reporter

"Summer's Children," a new 20-minute sound-and-color motion picture filmed mostly in Lancaster County to promote the Fresh Aid Fund of the New York Herald Tribune Newspaper, had it's premier showing at the Armstrong Cork Co auditorium last Friday evening Ninety-three of the rural families were honored for having served as hosts to New York children for 10 years or more

The movie features local families and their summer visitors from New York Richard Herr, Ronks R1, shows Joanne Vasquez New York City how to milk a cow, and Kenneth Koser provides a good time for the kids in his Narvon 'Swimming Hole' Stanley Moore Goldonville R1 a blacksmith by trade, spins some magic with a searing-hot iron hammered over an anvil Mr and Mrs Robert Lamb Paradise, set the stage for an out door barbecue and a moving bedtime scene featuring Kim Bolling, New York City, and Joseph Karl, Brooklyn saying their prayers before jumping into their bunk beds The grand finale takes place in the living room of the Charles Leaman family, Ronks, R1, with the entire cast gathered around the piano as Robert Secker, Lancaster, leads 'Pop Goes the Weasel"

Eugene Flynn, New York City, was also present at Armstrong because of the part he plays in some beautiful scenes taken in Connecticut.

In the 1964 summer season, 600 children spent vacations on 500 Lancaster County farms and "Friendly Town" homes.

Mrs John Groff, Marietta, who has served as a "Fresh Air" host for 31 years accepted the honors as a representative of the many families who have had youngsters for 10 years or more

The Fresh Air Fund started one hot Sunday morning in a tiny church in Sherman, a small mountain community in northern Pennsylvania, when the Rev. Willard Parsons described to his congregation conditions in the Lower East Side of New York, where he had previously served. The thought of children suffering in the slums that hot Sunday led his parishioners to send him back to the city to bring sixty youngsters to their homes for vacations

Now 86 years and nearly a million youngsters later, the program is still as simple as that. Families in towns, villages and hamlets in 12 eastern seaboard states open their hearts and their homes, and the Fresh Aid Fund brings them children who most need their hospitality and experience in healthful family living. Last year more than 10,000 boys and girls were given 2 week vacations by the 300 Friendly Town Committees.

Mrs John Buckwalter, Lancaster County Coordinator of the Herald Tribune Fresh Air Fund, presided over the meeting.

# County 2nd In Pa. Entries For Livestock Exp.

Pennsylvania livestock breeders will have 1,462 beef cattle, swine, sheep and horses in the eighth Pennsylvania Livestock Exposition, November 9 to 14 in the State Farm Show Building

This will be nearly half of the 3,364 total entered from 19 states H R McCulloch, exposition manager, said the Pennsylvania entries will come from 219 farms in 41 counties.

Ohio will be in second place among the states with 690 animals entered by 76 breeders Other states with entries are Vermont, Massachusetts, Connecticut New York, New Jersey, Delaware, Maryland, Virginia, South Carolina, Georgia, Kentucky, Indiana, Michigan, Illinois, Missouri and Oklahoma

Centre will lead Pennsylvania counties with 229 animals in 21 entries, including one of 113 animals from the Pennsylvania State University. This will be the largest single entry in the entire show.

York county will send 206 animals from 30 farms, while Lancaster will have 184 in 38 entries.
